## I. Introduction

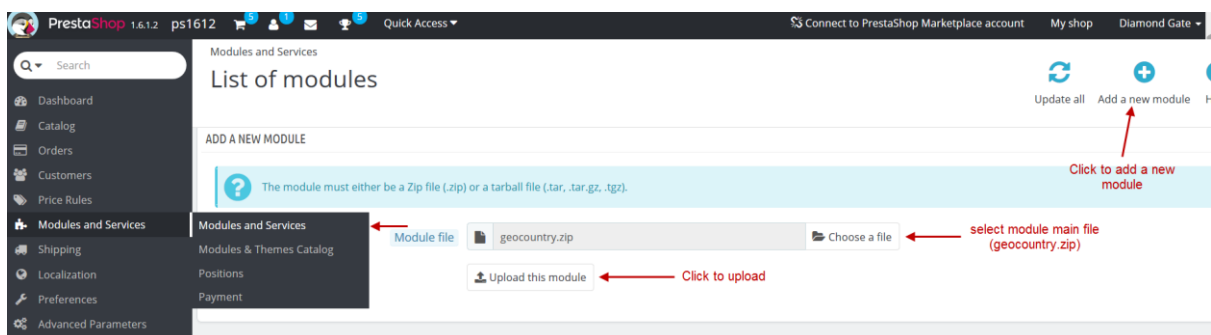

Owning a Prestashop online store that functions globally is not as hard as it seems. Or if I correct myself, it's not as hard as it seems when you have the right modules for the right task. A **location detection module for Prestashop** is something that is essential for a globally functioning business website since you get customers from many locations around the world. Our module **GEO Country** is one such module that can detect location and set other location dependent values for the customer.

Once the location of the customer is detected, the module will set country, language and currency, the first time they land on your site. Taxes, shipping cost and other relevant information will also be shown correctly for the customers depending on their location without showing the default values of Prestashop. The GEO Country module also helps you install the GeoIP feature (Geolocation by IP) for Prestashop easily.

## II. Installation

### 1. Upload the module to server

- Go to “*Modules and services*”
- Click “*Add a new module*”
- Choose module main file (*geocountry.zip*)
- Click “*Upload this module*” to upload the module

### 2. Install GEO country

Just click “Install” to install the module

Filter by Installed & Not Installed Enabled & Disabled Authors All authors

Front office Features

**GEO Country v1.0** - by PrestashopAddon.com

Automatically detect customer country base on IP address and set customer country, language and currency base on customer locatoin

+ Install

bulk actions

Click to install

### III. Country, language and currency settings

At this point, the installation of the module is finished. However, enabling of all the countries, languages and currencies to be used in your shop still remains. This is a necessary task because the module can detect and set the customer’s country, language and currency only if they are enabled in the shop. Otherwise it will return the default country, language and currency.

#### 1. Enable countries

Go to “*Localization / countries*” and enable all the countries that are needed for your shop.

Localization / Countries

### Countries

Select countries
Add new country Recommended Modules and Services Help

<input checked="" type="checkbox"/>	223	Virgin Islands (British)	VG	-	North America	x	Edit
<input checked="" type="checkbox"/>	224	Virgin Islands (U.S.)	VI	-	North America	x	Edit
<input checked="" type="checkbox"/>	225	Wallis and Futuna	WF	+681	Oceania	x	Edit
<input checked="" type="checkbox"/>	226	Western Sahara	EH	-	Africa	x	Edit
<input checked="" type="checkbox"/>	227	Yemen	YE	+967	Asia	x	Edit
<input checked="" type="checkbox"/>	228	Zambia	ZM	+260	Africa	x	Edit
<input checked="" type="checkbox"/>	229	Zimbabwe	ZW	+263	Africa	x	Edit

Apply

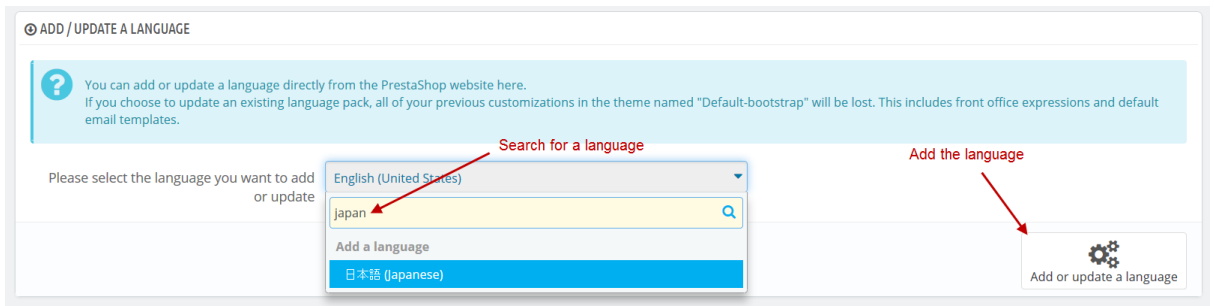

Display 1000 / 244 result(s)

<< < 1 > >>

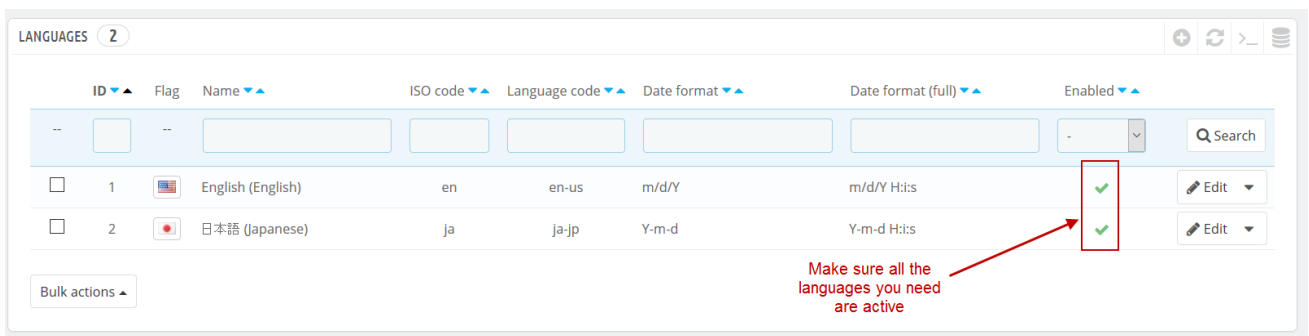

Enable all the selected countries

#### 2. Enable languages

- Add translation package: Go to “*Localization/Translation*”. Search for the languages you need from “*Add/update a language*” and click “*Add or update a language*” to add the languages to your shop.

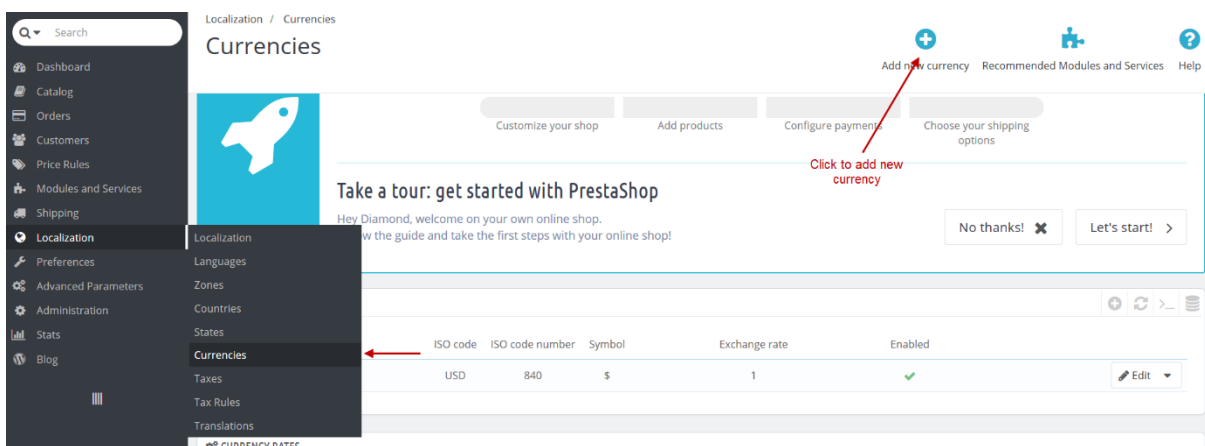

- Enable the languages (if they are disabled): Although you have added the language translation packages to your website, you still need to do one more check to make sure they are all active. Go to “*Localization/languages*”. Check and make sure all the languages you need are active. If not, activate them.

### 3. Enable shop currencies

- Go to “*Localization / currencies*”. Click “*Add new currency*” to add a currency.

- Fill in all required fields to add a new currency

The screenshot shows the 'CURRENCIES' configuration page. It contains several input fields and toggle buttons:

- \* Currency name:
- \* ISO code:
- \* Numeric ISO code:
- \* Symbol:
- \* Exchange rate:
- \* Currency format:
- Decimals: YES (selected) / NO
- Spacing: YES (selected) / NO
- Enable: YES (selected) / NO

- Make sure all currencies are active

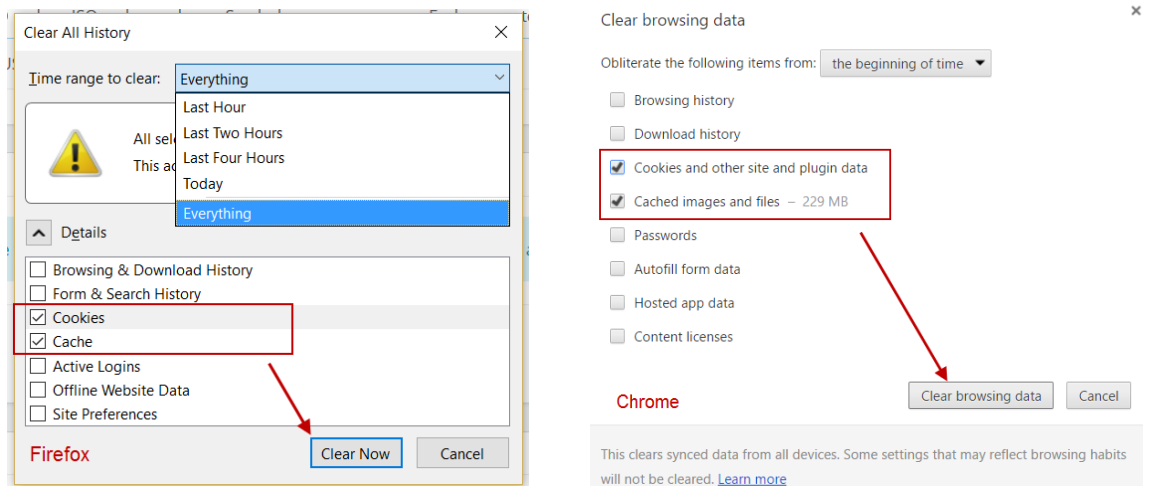

The screenshot shows a table with the following columns: ID, Currency, ISO code, ISO code number, Symbol, Exchange rate, and Enabled. The 'Enabled' column has a red box around a green checkmark, indicating the currency is active.

ID	Currency	ISO code	ISO code number	Symbol	Exchange rate	Enabled	
1	Dollar	USD	840	\$	1	✓	Edit

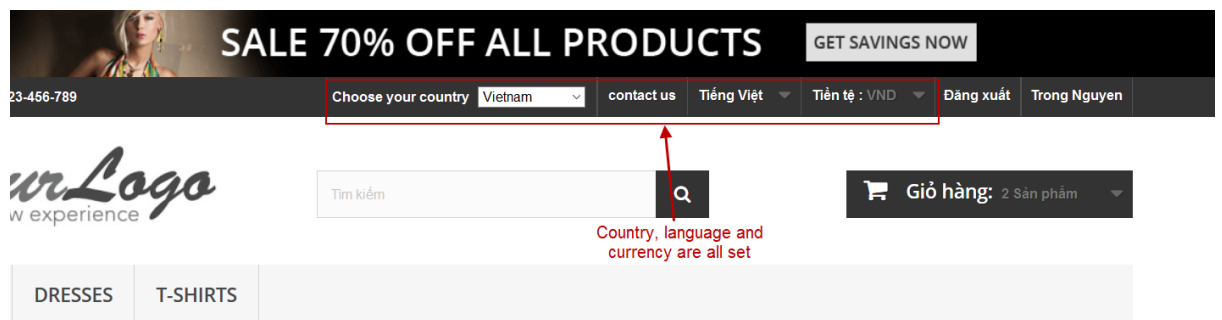

#### IV. Check the module

All the steps for setting up of the module are now complete. Now the module should be checked to see if it's working as expected.

Clear web browser's cookies and cache: This module detects customer country, language and currency and sets all relevant information (by saving all the information to web browser's cookie and cache) the first time a customer lands on your site. So you need to clear your web browser's cookies and cache data before checking the module.

- Go to your website home page and you will be able to see that the country, language and currency are all set in the header.

## V. Thank you

Thank you very much for installing this module to your website. If you need any support, don't hesitate to contact us.
