## I. Introduction

Completed building your Prestashop online store? That's great news. But wait a second before you put it to business. Does your website have all the cool new features that other online stores have? If you don't, our **free product image rollover module for Prestashop** can become your savior.

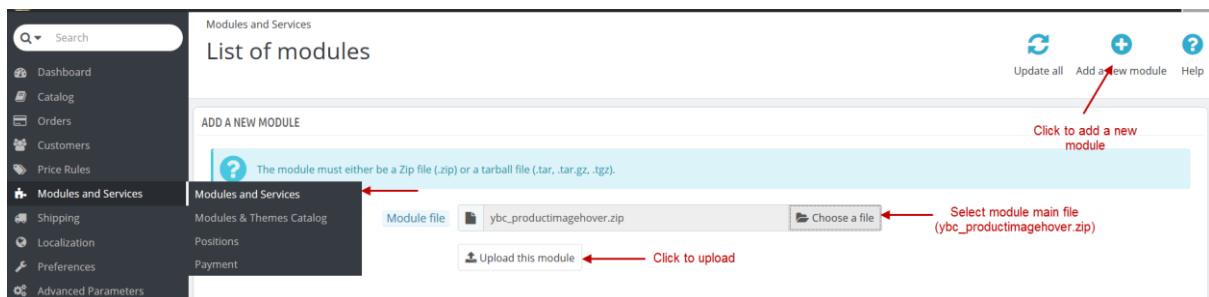

This module provides a product rollover effect for your store so that when a person hovers their mouse pointer over a product, several changes occur; the product image changes and also displays product details like the product price and also additional buttons to display more details about the product. Since this image rollover effect is not found in Prestashop by default, having a **Prestashop image rollover module** to obtain the feature is essential.

Easy installation of the module makes it possible for anyone to configure the module within several minutes just by reading the user guide document. The module is lightweight and provided completely free. Download the module today to enjoy the eye catching product rollover effects.

## II. Installation

### 1. Upload the module to server

- Go to “Modules and services”
- Click “Add a new module”
- Choose module main file (ybc\_productimagehover.zip)
- Click “Upload this module” to upload the module

### 2. Install the module

Just click “Install” to enable the module

### 3. Add custom hook to .tpl files

After installing the module from the back office, a final step still remains to be carried out to finish the installation of the module. A custom hook should be added to the product listing pages where you want to have the product image rollover effect.

- Add the custom hook to the product listing pages (category page, search page, new product pages...) and to the featured products module:
  - Open the file *themes/yourtheme/product-list.tpl*
  - Add `{hook h='productImageHover' id_product=$product.id_product}` right after the line of code which is used to display the default product image.

```

40 <!-- Products list -->
41 <ul if isset($id) && $id id="{<id>"/> if class="product_list grid row if isset($class) && $class {<class>}/> if">
42 {foreach from=$products item=product name=products}
43 {math equation="(total$perLine)" total=$smarty.foreach.products.total perLine=$nbItemsPerLine assign=totModulo}
44 {math equation="(total$perLineT)" total=$smarty.foreach.products.total perLineT=$nbItemsPerLineTablet assign=totModuloTa
45 {math equation="(total$perLineT)" total=$smarty.foreach.products.total perLineT=$nbItemsPerLineMobile assign=totModuloMo
46 {if $totModulo == 0}{assign var='totModulo' value=$nbItemsPerLine}/> if}
47 {if $totModuloTablet == 0}{assign var='totModuloTablet' value=$nbItemsPerLineTablet}/> if}
48 {if $totModuloMobile == 0}{assign var='totModuloMobile' value=$nbItemsPerLineMobile}/> if}
49 <li class="ajax_block_product if $page_name == 'index' || $page_name == 'product' col-xs-12 col-sm-4 col-md-3{else} col-
50 <div class="product-container" itemscope itemtype="https://schema.org/Product">
51 <div class="left-block">
52 <div class="product-image-container">
53 <a class="product_img_link" href="{<product.link|escape:'html':'UTF-8'>" title="{<product.name|escape:'ht
54 
59 <a class="quick-view-mobile" href="{<product.link|escape:'html':'UTF-8'>" rel="{<product.link|escape:
60 <i class="icon-eye-open"></i>
61 </a>
62 </div>
63 <a class="quick-view" href="{<product.link|escape:'html':'UTF-8'>" rel="{<product.link|escape:'html':'UT
64 <span{! s='Quick view'}/> </span>
65 </a>
66 {/if}

```

- Add a custom hook to the category products module:
  - Open the given view file of the *productscategory* module, it's located in *themes/yourtheme/modules/productscategory/productscategory.tpl*. If you can't find it, try to look for it in the modules directory *modules/productscategory/views/templates/hook/productscategory.tpl*

- Add `{hook h='productImageHover' id_product=$categoryProduct.id_product}` right after the line of code which is used to display default product image.

```

34 <div id="productscategory_list" class="clearfix">
35 <ul id="bxslider1" class="bxslider clearfix">
36 {foreach from=$categoryProducts item='categoryProduct' name=categoryProduct}
37 <li class="product-box item">
38 <a href="{\link->getProductLink($categoryProduct.id_product, $categoryProduct.link_rewrite, $categoryProduct.category,
39 
41 </a>
42 <h5 itemprop="name" class="product-name">
43 <a href="{\link->getProductLink($categoryProduct.id_product, $categoryProduct.link_rewrite, $categoryProduct.category,
44 </h5>
45 {if $ProdDisplayPrice && $categoryProduct.show_price == 1 && !isset($restricted_country_mode) && !$PS_CATALOG_MODE}
46 <p class="price_display">
47 {if isset($categoryProduct.specific_prices) && $categoryProduct.specific_prices
48 && ($categoryProduct.displayed_price|number_format:2 != $categoryProduct.price_without_reduction|number_format:2)
49
50 <span class="price special-price">{convertPrice price=$categoryProduct.displayed_price}</span>
51 {if $categoryProduct.specific_prices.reduction && $categoryProduct.specific_prices.reduction_type == 'percenta
52 <span class="price-percent-reduction small">{<span class="price-percent-reduction small">{<span class="price-percent-reduction small">{
53 {/if}
54 <span class="old-price">{displayWtPrice p=$categoryProduct.price_without_reduction}</span>
55
56 {else}
57 <span class="price">{convertPrice price=$categoryProduct.displayed_price}</span>
58 {/if}
59 </p>
60 {else}

```

Add a custom hook to product accessories:

- Open themes/yourtheme/product.tpl
- Add `{hook h='productImageHover' id_product = $accessory.id_product}` right after the line of code which is used to display default accessory product image.

```

499 </section>
500 <!--end HOOK_PRODUCT_TAB -->
501 {if isset($accessories) && $accessories}
502 <!--Accessories -->
503 <section class="page-product-box">
504 <h3 class="page-product-heading">{1 s='Accessories'}</h3>
505 <div class="block products_block accessories-block clearfix">
506 <div class="block_content">
507 <ul id="bxslider" class="bxslider clearfix">
508 {foreach from=$accessories item=accessory name=accessories_list}
509 {if ($accessory.allow_oosp || $accessory.quantity_all_versions > 0 || $accessory.quantity > 0) &&
510 {assign var='accessoryLink' value=\link->getProductLink($accessory.id_product, $accessory.link
511 <li class="item product-box ajax_block_product(if $smarty.foreach.accessories_list.first) firs
512 <div class="product_desc">
513 <a href="{\accessoryLink|escape:'html':'UTF-8'}" title="{\accessory.legend|escape:'htm
514 
516 </a>
517 <div class="block_description">
518 <a href="{\accessoryLink|escape:'html':'UTF-8'}" title="{1 s='More'}" class="produ
519 {\accessory.description_short|strip_tags|truncate:25:'...'}
520 </div>
521 </div>
522 </div>
523 <div class="s_title_block">
524 <h5 itemprop="name" class="product-name">
525 <a href="{\accessoryLink|escape:'html':'UTF-8'}">
526 {\accessory.name|truncate:20:'...':true|escape:'html':'UTF-8'}

```

#### 4. Check the module

After step 1, 2 and 3 is done, you have completed the installation of the module. Now when you hover your mouse pointer over a product in the listing pages, featured products module, category products module or product accessories you will be able to see the second product image.

### III. Module configuration

This module has 6 different rollover effects that can be used according to the preference of the website owner or to suit the website design or theme. The scrolling effects available include, zoom, fade, vertical scrolling top to bottom, vertical scrolling bottom to top, horizontal scrolling left to right and horizontal scrolling right to left.

The screenshot shows the Prestashop module configuration interface. At the top, there are filters for 'Filter by' (Installed & Not Installed, Enabled & Disabled) and 'Authors' (All authors). Below this, a module card for 'Product image rollover v1.0.1 - by PrestashopAddon.com' is displayed. The card includes a 'Configure' button with a red arrow pointing to it and the text 'Click to go to configuration area'. Below the module card, there is a 'bulk actions' dropdown. The configuration area is titled 'SETTING' and shows the 'Transition effect' set to 'Vertical Scrolling Bottom To T'. Below the dropdown, there are three lines of code for installation: 'Add {hook h='productImageHover' id\_product = \$product.id\_product} to product-list.tpl in your theme directory, just below the product images', 'Add {hook h='productImageHover' id\_product = \$categoryProduct.id\_product} to productscategory.tpl of productscategory module, just below the product images', and 'Add {hook h='productImageHover' id\_product = \$accessory.id\_product} to product.tpl in your theme directory, just below accessory products images'. A 'Save' button is located at the bottom right of the configuration area.

### IV. Thank you

Thank you very much for installing this module to your website. If you need any support, don't hesitate to contact us.
